

API REST

v1.7 (XML) and v2.0 (json)

Looking for a solution to get an accurate overview of all the technical and commercial characteristics of a Belgian vehicle? Autoconnect LookUp from inMotiv!

With the Autoconnect LookUp API REST service you have an integrable application that gives you a 360 ° view of every vehicle registered in Belgium.

You will receive **vehicle data** (basic characteristics, extensive technical data, ecoscore, version,...), **financial and commercial data** (prices, current residual value, future residual value, all types of taxes in Belgium, etc.) and **status data** (technical inspection, Car-Pass OK label, registration details,...) This way you have the most complete picture!

This application will save you considerable time in administrative tasks. The results can be easily packaged into a PDF report or CVS file.

Autoconnect LoopUp is also available via the Autoconnect web platform.

Inhoud

1. What is the LOOKUP API REST service?	3
1.1. Which data are available by VIN?	3
1.2. Which data are available by license plate number?	3
2. How should the REST service be called?	3

7.1. Explanation of data fields for license plate number	16
8. Error handling	17
9. Lookup tables	17
10. Contact and Support	20

1. What is the LOOKUP API REST service?

The Autoconnect LOOKUP REST service is a REST service to look up any Belgian vehicle data based on a **VIN** (vehicle inscription number) and get its full technical and commercial profile, or based on a **license plate number** and get the registration status.

1.1. Which data are available by VIN?

The available data is grouped in data blocks. Each data block is identified by a letter. Several data blocks can be requested in one API call, by writing them together in the request_list.

S	Vehicle exists block
B	Basic block
T	Technical block
X	Extended block
E	Emission block
M	Gearbox drivetrain block
A	Fiscal (tax) block
R	Registration block
C	Commercial block
V	Current residual value
F	Future residual value

1.2. Which data are available by license plate number?

Due to privacy protection rules, only the registration status of a plate is available:

R	Registration block
---	--------------------

Examples of the content of each block can be found further in this document. Please note that dependencies exist between blocks: some more advanced blocks cannot be accessed without other blocks in the same request. Block C requires B, R. Block A requires B, R, E. For Blocks V and F, you need to call block C first to get a version id.

2. How should the REST service be called?

One vehicle or plate status per call can be requested.

2.1. By VIN

The URL to look up a vehicle by VIN is built as follows:

<https://api.inmotiv.be/rest/lookup/1.6/<API key>/<vin>/<request list>/<kmeters>/<versionID>>

2.2. By license plate number

The URL to get the license plate registration status by license plate number is built as follows:

<https://api.inmotiv.be/rest/lookup/1.6/plate/<API key>/<plate>/R>

3. XML and json versions

The API is available in an XML and a json variant: XML by version numbers 1.x and json by version numbers 2.x.

The current version number of the XML variant is 1.7.

Previous versions that still can be accessed through the same URL, by modifying the version number, are 1.0, 1.1, 1.2, 1.3, 1.4, 1.5. Previous versions contain less fields and blocks.

The current version number of the json variant is 2.0.

The response will be returned as an XML or json document which will contain the requested data blocks in <request_list>. If the request was not well formed or if the requested vehicle was not found, the service will return an error message. Apart from the S block, the request will not be payable in that case.

4. Optional parameters

The parameter “/<kometers>” (current kilometers of a vehicle) only needs to be provided when data blocks V or F are requested in <request_list>.

The parameter “/<versionID>” is the versionID of a commercial version that can be found in the C block. This parameter is mandatory for the blocks A, V and F. This means that 2 consecutive requests are necessary for blocks A, V and F.

Data block C (commercial) returns a list of 0, 1 or more commercial profiles (versions) of vehicles found in our commercial vehicle database (Carwizard). We use a best-guess method to match technical data for the requested VIN with the commercial profile. We provide a probability score for each commercial version. The higher the score, the higher the probability that the vehicle was one of that version. Every commercial version has a versionID, which can be used to fetch the commercial vehicle profile from the Autoconnect CARWIZARD API.

5. Authentication

For using the LOOKUP REST API service, just like any other Autoconnect API service, you need an API key, which is connected to an existing user in Autoconnect. This API key allows us to measure the service usage and charge per transaction.

The response of a request will be displayed in the language of the user. The descriptions are available in Dutch, French and German.

If your application is using multiple languages, you will need multiple API keys, one for each user with a different language.

Besides this REST service, the same data is also available through our web-application, and by exchanging batch (csv/txt) files.

6. Example of a request by VIN

We will demonstrate and explain the response using an example of a request for XML. For json, please just change the version number to 2.0.

<https://api.inmotiv.be/rest/lookup/1.7/<APIkey>/WAUZZZ4G5HN009507/BXERSTPCAVF/7705/150602>
59

In this example, the following components are:

- **WAUZZZ4G5HN009507**: the VIN number
- **BXEMRSTPCAVF**: the list of blocks
- **7705**: the current number of kilometers of this vehicle
- **15060259**: the versionID of the commercial version, coming from a former request of block C

This example request is done using a French speaking user's API key and returns this XML:

```
<?xml version="1.0" ?>
<VINdata>
  <Request>
    <VIN>WAUZZZ4G5HN009507</VIN>
    <RequestedBlocks>SBXEMRTPCAVF</RequestedBlocks>

```

The future residual values are based on default settings:

- Contract duration is 48 months
- Curve periodicity is 1 time per year
- The annual mileage is 25000 km/year

Autoconnect also provides a separate API for calculating current and future residual values, in which these parameters can be changed.

6.1. Explanation of data fields for VIN

Please find below a list of available data fields for each data set (block). We use the following abbreviations:

- A: Alphanumeric
- N: Numeric
- V: Variable Length (if not specified, the default value is fixed)

	Length	Type	Description
Data Set B: Basic Vehicle Data			
MakeTypeDescr	60	A,V	Make name
CommercialName	20	A,V	Model name
WVTA	40	A,V	European Whole Vehicle Type Approval number and amendment
Version	35	A,V	Version code, given by manufacturer
Variant	25	A,V	Variant code, given by manufacturer
ColourCode	1	A	Colour Code (see appendix for table)
Colour	30	A,V	Colour Description. Only approximately 10 main colours can
FuelCode	2	N	Fuel code (see appendix for table)
FuelType	30	A,V	Fuel description as given by

Data Set X: Extended Vehicle Data			
Revision	2	N	Revision, given by manufacturer
Type	25	A,V	Type, given by manufacturer
PvaBelgium	6	A,V	Belgian homologation file number (PVA/PVG)
BuildDate	10	A	Vehicle build date
CategoryCode	5	A,V	European category code
Category	100	A,V	European category description
Bodyworktype	2	A	European bodywork type code, see appendix
BodyworkTypeLabel	100	A,V	Bodywork type description
KindCode	2	A	Vehicle kind code
Kind	30	A,V	Vehicle kind description
MakeDiv	4	A,V	Make code as known by Belgian authorities
TypeDiv	5	A,V	Model code as known by Belgian authorities
Buildup	2	A	Code for build-up equipment, if applicable
EuroNorm	3	A	Euronorm (without the word "EURO")
EuroNormType	10	A,V	The level of emission performance
Status	30	A,V	Description of the vehicle life cycle status
StatusCode	3	A,V	Abbreviation for the vehicle life cycle
LegalStatus	30	A,V	Description of the vehicle legal status
LegalStatusCode	3	A,V	Abbreviation for the legal status code

AdministrativeStatus	30	A,V	Description of the administrative status
AdministrativeStatusCode	3	A,V	Abbreviation of the administrative status
OffRoad	1	A	'G' value if the vehicle is an 'off-road'; no values in other cases
Configuration	2	A	Configuration (Pick-up,...)
TankContent	6	N	Tank content in liter
TotalAxles	2	N	Total number of axles
NumberOfSeats	3	N	Number of seats
NumberOfStandingPlaces	3	N	Number of standing places
NumberOfFrontPlaces	2	N	Number of front places
NumberOfRearPlaces	2	N	Number of rear places
NumberOfTotalPlaces	3	N	Total number of places
Length	6	N	Vehicle length (in mm)
Width	6	N	Vehicle width (in mm)
Height	6	N	Vehicle height (in mm)
Tare	6	N	Vehicle tare (in kg)
MassOnCoupling	6	N	Maximum mass on coupling point (in kg)
MassInRunningOrder	6	N	Mass in running order (in kg)
MaxMassOnAxles	6	N	Maximum mass on axles (in kg)
MaxMassTrailerCombination	6	N	Maximum mass of the trailer combination (in kg)
TechnicPermissibleMass	6	N	Technical permissible maximum mass (in kg)
MmaNational	6	N	National maximum mass (in kg)
LoadWheelbaseRatio	2	A	Ratio Load to Wheelbase
Suspension	100	A,V	Suspension Type
ConnectMode	50	A,V	Type of connection for trailer
TotalCylinderCapacity	5	N	Cylinder Capacity (cc)
MaximumNetPowerRPM	6	N	Maximum power reached at rotations per minute
WeightPowerRatio	6	N	Ratio Weight to Power
MaxNetPower	4	N	Maximum vehicle power (kW).
Max Speed	6	N	Maximum speed (km/h or miles/h)
HandicCarFlag	1	A	Indication if the vehicle is adapted to disabled people
TachoFlag	1	A	Indication if the vehicle has a tachograph
EngineID	15	A	Manufacturer's engine code
CustomStickerCode	1	A,V	One digit, indicates the way the preregistration was handled at import
CounterType	1	A	Number of digits on the odometer (5 or 6)

Data Set E: Vehicle Emission Data

CoEngineTest	5	N	CO emission for engine test (mg/kWh)
NoxEngineTest	4	N	NOX emission for engine test (mg/kWh)
NmhcEngineTest	4	N	NMHC emission for engine test (mg/kWh)

ThcEngineTest	4	N	THC emission for engine test (mg/kWh)
Ch4EngineTest	4	N	CH4 emission for engine test (mg/kWh)
ParticulatesNumberEngineTest	4	N	Number of particulates emission for engine test (10 ⁸ particulates/km)
ParticulatesMassEngineTest	7	N	Mass of particulates emission for engine test
CoBenchTest	5	N	CO emission at bench test (engine and vehicle) (mg/km)
NoxBenchTest	4	N	NOX emission at bench test (engine and vehicle) (mg/km)
NhmcBenchTest	4	N	NMHC emission at bench test (engine and vehicle) (mg/km)
HcBenchTest	4	N	HC emission at bench test (engine and vehicle) (mg/km)
HcNoxBenchTest	4	N	HC+NOX emission at bench test (engine and vehicle) (mg/km)
SmokeCorrectCoefficientBenchTest	4	N	Smoke correction coefficient at bench test (m-1)
ParticulatesNumberBenchTest	4	N	Number of particulates emission at bench test (engine and vehicle)(10 ⁸ particulates/km)
ParticulatesMassBenchTest	7	N	Mass of particulates at bench test (engine and vehicle)
Co2Combined	4	N	Combined NEDC or WLTP CO2 exhaust (gr/km)
Co2Urban	4	N	Urban NEDC CO2 exhaust (gr/km) (if known)
Co2ExtraUrban	4	N	Extra urban NEDC CO2 exhaust (gr/km)
Co2NEDCCombined	4	N	Combined NEDC CO2 exhaust (gr/km)
Co2NEDCWeightedCombined	4	N	Weighted combined NEDC CO2 exhaust (gr/km), used for plug-in hybrids
Co2WLTPCombined	4	N	Combined WLTP CO2 exhaust (gr/km)
Co2WLTPWeightedCombined	4	N	Weighted combined WLTP CO2 exhaust (gr/km), used for plug-in hybrids
FuelConsumptionCombined	4	N	Combined fuel consumption (cl/100km)
FuelConsumptionUrban	4	N	Urban fuel consumption (cl/100km)
FuelConsumptionExtraUrban	4	N	Extra urban fuel consumption (cl/100km)
SoundLevelStationary	4	N	Sound level stationary (dB)
SoundLevelDriveBy	4	N	Sound level drive by (dB)
MeaurementUnitEmission	1	N	Unit of measuring the emission
ExhaustEmissionLevelEuro	10	N	Detailed Euronorm

Data Set M: Gearbox Drivetrain Data

Gearbox	10	A	Gearbox type: Manual or Automatic (all aut. types)
Drivetrain	10	A	Which axles are powered. Can contain FWD, RWD AWD.
Drivewheels	10	A	How many wheels versus total are powered.

Data Set R: Registration Data

PreRegistrationDate	10	A	Date when vehicle data was registered at the DIV
----------------------------	----	---	--

FirstRegistrationDate	10	A	First registration date of the vehicle in Belgium
LastRegistrationDate	10	A	Last registration date of the vehicle in Belgium
DeletionDate	10	A	Date when the vehicle was removed
Demolished Code	1	A	Vehicle demolished code:
			0: demolished by a non-approved center
			1: demolished by an approved center
Completion	100	A, V	Is the vehicle complete or incomplete

Data Set A: Fiscal data

BenefitInKind	Amount	8,2	N	Benefit in kind (VAA, ATN)
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
RoadTaxFlanders	Amount	8,2	N	Yearly road tax in Flanders
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
RoadTaxBrussels	Amount	8,2	N	Yearly road tax in Brussels
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
RoadTaxWalloon	Amount	8,2	N	Yearly road tax in Wallonia
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
RegistrationTaxFlanders	Amount	8,2	N	Registration tax in Flanders
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
RegistrationTaxBrussels	Amount	8,2	N	Registration tax in Brussels
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
RegistrationTaxWalloon	Amount	8,2	N	Registration tax in Wallonia
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
FiscalHorsePower	Amount	8,2	N	Fiscal horsepower
	Remarks	300	AN	
	Url	150	AN	The URL points to the according government website for more information.
EcoScore	Amount	8,2	N	Ecocode (formula by VITO)
	Remarks	300	AN	

	Url	150	AN	The URL points to the according government website for more information.
--	-----	-----	----	--

Data Set T: Technical Control Data

TechnicalControlValidDate	10	A	Validity for technical inspection (if the vehicle has passed technical inspection at least once)
DistanceType	1	A	Odometer reading in km (K) or miles (M)
CurrentDistance	7	N	Odometer reading at the last inspection.
PreviousDistance	7	N	Odometer reading at the last but one inspection.

Data Set C: Commercial Profiles

Version_id		N	Version id of a corresponding commercial vehicle profile in Autoconnect Carwizard
Score		N	Probability that the commercial version is the right version for the technical vehicle profile. The higher the score, the more likely the version is the correct commercial profile. Commercial versions are ranked from high score to low score.
VersionName		A	Commercial name of the profile
VersionBodyworkType		A	Autoconnect Carwizard bodywork type description. This does not always match with the technical BodyWorkType in Data Set X.
VersionCatalogPrice		N	The historical catalogue price of the version (when the vehicle was a new vehicle on the market)

Data Set V: Current Residual Value Data

CurrentMileage	10	N	Current mileage
CatalogPrice	10	N	Historical catalogue price of the version (when the vehicle was a new vehicle on the market)
B2Bvalue	10	N	Current business to business residual value
B2Cvalue	10	N	Current business to consumer value
C2Cvalue	10	N	Current consumer to consumer value
OpinionIndication	300	AN	Disclaimer

Data Set F: Future Residual Value Data

CurrentMileage	10	N	Current mileage
CatalogPrice	10	N	Historical catalogue price of the version (when the vehicle was a new vehicle on the market)
ContractDuration	10	N	Contract / life time duration
CurvePeriodity	10	N	How many interval points per year
AnnualMileage	10	N	Annual mileage
B2Bvalue	10	N	Current business to business value
B2Cvalue	10	N	Current business to consumer value

C2Cvalue	10	N	Current consumer to consumer value
EndB2Bvalue	10	N	Future business to business end value
EndB2Cvalue	10	N	Future business to consumer end value
EndC2Cvalue	10	N	Future consumer to consumer end value
EndMileage	10	N	Mileage at the end of the period

7. Example of a request by license plate number

We will demonstrate and explain the response using an example of a request for XML. For json, please just change the version number to 2.0.

<https://api.inmotiv.be/rest/lookup/1.6/plate/<APIkey>/1RFY428/R>

In this example, the following components are:

- **1RFY428**: the license plate number
- **R**: the only possible block Registration info when using the API with a license plate number

```
<VINdata xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns:xsd="http://www.w3.org/2001/XMLSchema">
  <Request>
    <PlateNumber>1RFY428</PlateNumber>
    <RequestedBlocks>R</RequestedBlocks>
    <RequestId>2018612707</RequestId>
    <Language>NL</Language>
    <MemberId>6</MemberId>
  </Request>
  <Block xsi:type="BlockR" name="Registration data" id="BlockR">
    <PlateMessage>De kentekenplaat is toegekend aan een voertuig</PlateMessage>
    <PlateDate>13/06/2019</PlateDate>
    <IsPlateActive>True</IsPlateActive>
  </Block>
</VINdata>
```

7.1. Explanation of data fields for license plate number

Please find below a list of available data fields for block R in the response. We use the following abbreviations:

- A: Alphanumeric
- N: Numeric
- V: Variable Length (if not specified, the default value is fixed)

	Length	Type	Description
Data Set R: License plate registration status			
PlateMessage	60	A,V	A textual description (in the language of the user) indicating the status of the plate.
PlateDate	10	A,V	Date of last transaction on the plate.
IsPlateActive	5	A,V	True/False indication if the plate is actively registered.

8. Error handling

When an error occurs there will be only error nodes available under the element <VINdata>. The first one is <ErrorType> which is the codename for the error, and the second one is <ErrorDescription> which is a more detailed explanation of the error.

In the table below you will find the possible error codes:

ErrorType	ErrorDescription
NOAUTH	Sorry, you do not have access to this service!
NOTFOUND	Sorry, this vehicle does not exist in our system.
INVALIDDATA	Sorry, this VIN is invalid. A VIN should never contain more than 17 characters and never contain the letter O.
COMERROR	Sorry, one or more data sources are unavailable at this moment. Please try again later or contact servicedesk@inmotiv.be

9. Lookup tables

The following lookup tables display possible values for selected data elements.

Colour codes	Description (output will be determined by language of API, and is limited to only Dutch or French)
A	Black
B	Green
C	White
D	Grey
E	Yellow
F	Beige
G	Red
H	Brown
I	Blue
J	Orange
K	Bordeaux
X	Unknown

Fueltype codes	Description (output will be determined by language of API, and is limited to only Dutch or French)
01	Petrol
02	Diesel
03	LPG (Liquefied Petroleum Gas)
04	Electricity
05	Other
06	CNG (Compressed Natural Gas)
07	Petrol + Elektriciteit
08	Diesel + Elektriciteit

Category Codes	Description
Category M	used for the carriage of passengers
Category M1	no more than eight seats in addition to the driver seat (mainly, cars)
Category M2	more than eight seats in addition to the driver seat (buses)
Category M3	having a maximum mass not exceeding 5 tonnes (11,000 lb)
Category N	having a maximum mass exceeding 5 tonnes
Category N1	used for the carriage of goods (trucks):
Category N2	having a maximum mass not exceeding 3.5 tonnes (7,700 lb)
Category N3	having a maximum mass exceeding 3.5 tonnes but not exceeding 12 tonnes (26,000 lb)
Category O	having a maximum mass exceeding 12 tonnes
Category O1	trailers (including semi-trailers)
Category O2	maximum mass not exceeding 0.75 tonnes (1,700 lb)
Category O3	exceeding 0.75 tonnes but not exceeding 3.5 tonnes (7,700 lb)
Category O4	exceeding 3.5 tonnes but not exceeding 10 tonnes (22,000 lb)
Category L	Motor vehicles with less than four wheels [but does include light four-wheelers]
Category L1	A two-wheeled vehicle with an engine cylinder capacity in the case of a thermic engine not exceeding 50 cm ³ and whatever the means of propulsion a maximum design speed not exceeding 50 km/h.
Category L2	A three-wheeled vehicle of any wheel arrangement with an engine cylinder capacity in the case of a thermic engine not exceeding 50 cm ³ and whatever the means of propulsion a maximum design speed not exceeding 50 km/h.
Category L3	A two-wheeled vehicle with an engine cylinder capacity in the case of a thermic engine exceeding 50 cm ³ or whatever the means of propulsion a maximum design speed exceeding 50 km/h.
Category L4	A vehicle with three wheels asymmetrically arranged in relation to the longitudinal median plane with an engine cylinder capacity in the case of a thermic engine exceeding 50 cm ³ or whatever the means of propulsion a maximum design speed exceeding 50 km/h (motor cycles with sidecars).
Category L5	A vehicle with three wheels symmetrically arranged in relation to the longitudinal median plane with an engine cylinder capacity in the case of a thermic engine exceeding 50 cm ³ or whatever the means of propulsion a maximum design speed exceeding 50 km/h.
Category L6	A vehicle with four wheels whose unladen mass is not more than 350 kg, not including the mass of the batteries in case of electric vehicles, whose maximum design speed is not more than 45 km/h, and whose engine cylinder capacity does not exceed 50 cm ³ for spark (positive) ignition engines, or whose maximum net power output does not exceed 4 kW in the case of other internal combustion engines, or whose maximum continuous rated power does not exceed 4 kW in the case of electric engines.
Category L7	A vehicle with four wheels, other than that classified for the category L6, whose unladen mass is not more than 450 kg[3] (650 kg[4] for vehicles intended for carrying goods), not including the mass of batteries in the case of electric vehicles and whose maximum continuous rated power does not exceed 15 kW.

Status Codes	Description
DES	Destroyed
REH	Repaired
NOR	Normal
ACC	Accident
WHO	Without Homologation
INC	Incomplete
VAL	In validation procedure

Legal Status Codes	Description
NOR	Normal
STL	Stolen

Administrative Status Codes	Description
EXP	Exported
IMP	Imported
NOR	Normal
NIO	Not in Order
FEX	Pending to be exported

Gearbox Types	Description
Manual	Normal
Automatic	All types of automatic gearboxes: e.g. Tiptronic, S-Tronic, CVT, ...

Drivetrain Types	Description
FWD	Front wheel drive: the vehicle's first axle is powered.
RWD	Rear wheel drive: one or more axles other than the first axle is powered.
AWD	All wheel drive: all axles of the vehicle are powered.

Drivewheel Types	Description
2x4	Example when 1 out of 2 axles (2 out of 4 wheels) is powered (FWD or RWD).
4x4	All 4 wheels are powered.
4x6 (etc.)	Example when 2 out of 3 axles (4 out of 6 wheels) is powered (mostly RWD).

10.Contact and Support

We are pleased to support you and answer any questions about our products. Don't hesitate to contact our service desk.
